

4 Important Reasons To Use Our Built In Email Form

1. *I was going to place this as reason # 4, ultimately however, this is the simplest reason why to use our built in mail form.*

IT Works!

Plain and Simple!

No fuss, no muss, and no kicking your computer, cuz a pop-box say's you do not have your email client installed.

2. **Security**

whoa, how come I do not see an email address on the full-page ad sample?

In fact I do not see an email address any where in the ads you placed for our property.

That is done to keep your contact information from being collected by computer programs, thereby cutting down on spam.

Your email address is embedded (hidden) in the email form we provide on your full-page ad.

Furthermore we place all the other ads under our account, which limits the use of your contact information as well.

3. **Phone Numbers**

Using phone numbers is great, however our experience shows us that people like to email rather than using the phone.

Having that combination of phone number and email access will increase your ability to contact people interested in your property.

If you do not have an email account, let us know.

We can help set one up for you.

Bajasunsets.net can also set-up a temporary email account for you to just receive items concerning you property.

4. **Email Clients!**

Do not know what that is, do not care; skip on ahead, cuz this might get a little confusing.

Just know that people not using an email client, are not able to just click on an email link to send you an email message.

Our email form gets that message to you, no matter how the person's computer is configured.

Here goes.

An Email client is a program that is used to handle email, and there are all kinds out there.

***You might be familiar with Outlook express that comes with Windows Operating Systems,
That is an email client.***

***If your computer does not have one installed, then clicking on a email link will provoke a warning box to pop up and say something to the effect of,
" message cannot be sent, client not installed". Irritating huh?***

***You can see what I mean by clicking this link
bruceharmer@bajsunsets.net,***

You might not get the warning box, you might get an email form that opens up, however unless the client is configured, the message will not be sent. Even more Irritating

Installing and configuring an email client is beyond the scope of this article.

The overall point is this.

If a person viewing your ad is working hard to save up money to buy a place in Roasarito, they might not have time to install and configure an email client.

That customer just wants to buy a place down here, and we make it easy for them.
